

You missed a spot...

It's easy to do if you use a white fluoride varnish. **DuraShield®** is easy to see *and* apply—every time.

Why take a risk and waste time? DuraShield® is an incredibly effective, fluoride treatment that's effortless to apply. Its light amber color lets you know the tooth surface is completely covered, yet is almost undetectable to your patient. Each .40 ml unit dose pack can be mixed prior to application, guaranteeing a consistent fluoride level. And with the handy UltraBrush™ 2.0 bristle brush, DuraShield is a total application system... just pop it open, and you're ready to go.

But most important, DuraShield works. As a powerful desensitizing agent, DuraShield relieves hypersensitivity where dentin or cementum are exposed. Its 5% sodium fluoride formula sets on contact with saliva and releases fluoride for up to eight hours. That means enhanced fluoride uptake, with minimal food or drink restrictions for your patients. You can be confident your patients are protected. And the Bubble Fun® Flavor is great for patients of all ages.

Easy... fast... effective. When it comes to doing the job right on fluoride treatments, you can't miss with DuraShield.

If you like DuraShield®, you'll love these Sultan products...

Topex® Fluoride Foam

Easy, 60-second application. Dense enough to provide excellent coverage, yet stays in the tray under bite pressure for a more pleasant patient experience. Five delicious flavors!

Topex® Dual Arch Fluoride Trays

Its natural arch and more defined occlusal anatomy helps force fluoride onto all biting and interproximal tooth surfaces. Locking handles allow for easy placement and removal. Available in four sizes.

Topex® APF Fluoride Gel

Thixotropic formulation remains in the tray, reducing fluoride ingestion. Fast, 60-second application. Available in five great Topex flavors.

Topex® Topical Anesthetic

Quick onset delivers maximum strength 20% benzocaine for fast, temporary relief of pain. Reduces salivation, keeping gel active longer. Seven great flavors!
